W01 Notes

When designing websites and applications is a fast-moving technology and now, we need to prepare for a various number of screens from desktops, mobile phones, tablets or even wearable technology. So, when designing I need to account for these so I can design better and more functional apps.

When designing start small and then work your way up. This tends to be easier and easier to scale objects when making web design. Mobile is not a fad and that it isn't going anywhere so I as a web designer I need to be able to have the skills when approaching various jobs.

Think, design, test and create. These are the basic steps to create anything and is vital to understand and learn this approach when thinking about projects within web design. One thing that stuck out to me was in the create step how it said never be afraid of going back and editing and repeating steps 1-3. This is something that can create an even better image than one before.

JavaScript, HTML and CSS are the founding blocks of all modern website designs its important to understand how these languages interact with one another and how I can make these to my advantage to make clean and crisp webpages.

This section helped me learn how to create an is this number even or odd calculator combining all that we learned in previous class and sections of this book. JavaScript is a powerful tool that we can use to make out users interact with our websites.

These programs were very useful as well like for instances the note it program showed me how to get text input from the user and display it on the website.

A lot within the Doing stuff did feel like review from previous course and I am excited to learn more and gain more skills to use while building sites.
